

How would you like to increase the Power and Performance of your Audi / VW without changing your Car?

The TDI and Turbo Petrol range of engines from the Volkswagen Audi group are the most solid, durable and most reliable series of engines ever made.

Have you often wondered why there are several KW versions of the exact same engine in the same range of car? For example both Audi and VW sell 1.9TDI cars with 66KW, 74KW, 81KW, 96KW and 110KW although this performance comes out the same engine. The same can also be said with the other 2.0TDI, 2.5TDI, 3.0TDI and 4.0TDI range of engines.

The reason for this apart from one being priced a lot more than the other is simply an upgraded software version on the ECU (Engine Control Unit). What this means is that you can still have the power of the 110KW model without changing the car even if yours is 66KW to start with.

- ▶ At **Tune-tec** we can re-map, or in simpler terms reprogram certain variables in the ECU software so that the engine can perform to the capabilities it was built for. All this is done safely and within the scope of the car and more importantly without invalidating or affecting the manufacturer's warranty.
- ▶ Below are some examples of typical performance gains you can achieve from some of VW / Audi's most popular cars:

Make	Engine	Model	Increase
Audi A4	1.9TDI	74KW	up to 110KW
Audi A3	2.0TDI	103KW	up to 128KW
Audi TT	1.8T	132KW	up to 161KW
Audi TT	1.8T	165KW	up to 191KW
VW Golf	1.9TDI	66KW	up to 110KW
VW Passat	1.9TDI	66, 74, 81KW	all up to 110KW

Even if your car is not listed in these examples we can still tune all TDI and Turbo Petrol cars to increase KW and torque up to 45%
